CHAPTER 2

Crafts and Puzzles
BRINGING ALL PARTS INTO PLACE
BELIEVE IT OR NOT, THE BIGGEST (AND MOST SIGNIFICANT) CHALLENGE OF writing a course paper, thesis or dissertation is not getting the tables, figures, abstract and appendix in correct formats and in the right places, with the spacing and page headings just right. Professional formats and conventions make your work look professional and in control, but they don't necessarily mean that it is professional and in control.

Your professors and graduate chair will ensure that your work is good, Chapter 1 will help you make it look good; the purpose of this chapter is to make it sound good. Robert Sternberg (1993), an internationally acclaimed psychologist and professor at Yale University made this observation:

I have discovered that whereas it is usually easy to distinguish well-presented good ideas from well-presented bad ideas, it is often impossible to distinguish poorly presented good ideas from poorly presented bad ideas. . . . If an idea is presented in a sloppy, disorganized fashion, how is one to know whether this fashion of presentation reflects the quality of the idea or merely the quality of its presentation?

So the quality of presentation can be as enhancing—or as damaging—as the quality of the work itself. Unfortunately there is no formula for making your presentation accurate, coherent, and accessible. And there are no dispensations that ease up on requirements because you are writing a dissertation, as there are for the forms and formats.

A mindset that has become popular with professional writers and writing teachers during recent years might be helpful to you in conceptualizing and dealing with writing tasks. It's actually a classification: Writing is a craft. A versatile writer and writing theorist named Donald Graves (1985) explained it this way: "A craft is a process of shaping material toward an end" (p. 6). View yourself as a crafts-person with a large mass of facts, literature, precedent, and study data. You are shaping that material to present it to a particular audience for a significant purpose. If you approach your task with this sort of orientation, you may find that some of those shaping and perfecting processes seem to make more sense.

Your Sketch and Plan: a/k/a An Outline

Why does a sculptor sketch and model before taking on a block of marble? In order to fulfill the potential of the marble and the artist, strokes must be purposeful and accurate. Hap-
hazard slicing will not produce beauty and grace. It won’t produce a coherent thesis or
dissertation either. Careful planning is necessary in order to maximize the potential
of your materials and your talents.

Yes, I know teachers have been preaching to you about outlines for years. There must
be a reason for this, since outlining is a topic that is not any more fun to teach than to
listen to. Outlining is hard, and it is usually time consuming. But ultimately its value
in time efficiency and quality assurance is well worth what you
put into it.

An outline really is a way of exploring patterns and relationships.

BEGIN BY LOOKING AT THE SHAPE OF
YOUR INFORMATION

Yes, information has shape—logic of form and proportion—just as
visual art, music, and poetry do. And people respond, consciously
or subconsciously, to shape and rhythm in the flow of informa-
tion, just as they do in the arts.

The natural shape of the information will become the major sec-
tions of your outline (and thus of your chapter, article or paper).

If you are doing an article or a course paper, find your shape by looking at your
purpose and the information you have to develop it.

- If you’re treating a problem and solution with about equal weight, then you have
  a natural two-part structure.
- If you’re looking at two possible solutions to your problem, then you have a
  natural three-part structure.
- If you’re exploring components, the shape will be determined by the number
  you will treat and the relative weight you plan to give them.
- If you are approaching something historically, then you may section off by
  historical periods, or possibly by philosophical positions, contextual circum-
  stances, influences, or schools.
- If you have done an experiment, the classic five-part experiment presentation
  will be your overall pattern and will form the main sections of your outline (I,
  II, III etc.).
For a thesis or dissertation, the overall shape provided by the chapters may be determined for you. If you have done an experiment, the shape of some of your sections will be predetermined as well. Be careful in setting up the structure of your dissertation according to the basic pattern and the headings given you by your chair.

**CONSIDER THE CONTRIBUTION THAT EACH SECTION MAKES TO THE WHOLE**

Group the information that develops each section so that it can fulfill its purpose. Look for a pattern within these units as well. This pattern will become the A, B, C sections of your outline.

**Choose content and shape for the introduction.** Sometimes introductory subsections are garbled because writers forget that information needs a shape and pattern that generate a purposeful sequence. Decide before you begin drafting what needs to be established in your introductory section and what would be the natural sequence for presenting it. A few common patterns are given to illustrate:

- Are you going from broad importance gradually toward specific applications supported by a progression of studies?
- Are you going to look at reasons for importance, followed by a historical overview of developing interest and increasing research?
- Are you going to begin with specific applications, broaden into theory, and then analyze the applications in terms of the theory?

**Work out developmental subsections.** The subsections that develop each of the important aspects of your pattern should be separate, mutually exclusive, and logically sequenced. After you have worked out your pattern, sort your references, inferences, and conclusions accordingly. If you have a database or sorter for your notes, let this mechanical servant help you out. If not, you are your own sorter or database. Perform this function before, not after, you get into the thick of drafting. Again, a few fairly typical examples are offered:
Example 1. When putting together your review of literature, decide on a general pattern. Perhaps your particular project brings together what is known about four different aspects of your topic. These four aspects then become your pattern for the review of literature. Be sure the four are sorted according to a principle of division that can be consistently applied so that they do not overlap (and thus lead to drifting and repetition). Also be sure that you do not include an aspect that doesn’t really apply.

II. Review of Literature
A. Family influences
B. Parent influences
C. Peer influences
D. Community influences

II. Review of Literature
A. Family influences
B. Peer influences
C. Community influences
D. School interventions

II. Review of Literature
A. Influences
   1. Family
   2. Peer
   3. Community
B. Interventions
   1. Family based
   2. School based
Example 2. When putting together a section of conclusions, list out the conclusions and group under each the information you need to demonstrate and support your reasoning. If some of the conclusions extend or build on others, arrange them in the sequence that is necessary for them to be clearly understood. Eliminate information that is not necessary so that it won’t distract from your reasoning patterns. Try to end on your strongest and best supported conclusion.

Start strong. Unless sequence relationships prevent it, begin with one of your strongest conclusions/reasons/examples/applications etc.

Put weaker materials toward the center. Central positions are those of least emphasis—the reader is usually sleepiest.

End on your strongest area if you possibly can. A feeling of unsteadiness or disorientation comes when a piece ends on a weak or underdeveloped point.

A top-heavy structure leaves both you and your reader a little unsure.

"FLESH IT OUT"

Now fill in the supporting data, along with evidence, citations, quotations, details, explanations, definitions, applications. Give your paper, article, thesis or dissertation the substance it needs to be convincing, interesting, and useful. These groupings will become the 1/2/3 and a/b/c levels of your outline.
II. Review of Literature
   A. Family influences
      1. Necessary definitions
      2. General background
      3. Initial studies 1985-1994
      4. Extended studies 1994-2004
      5. Calls for additional studies

Now that you have the parts in place, bring them together into a smoother, more coherent whole. Turn that group of vague topic-notes into complete sentences.

No, this isn't a senseless torture invented by English teachers. Expressing each section and subsection as a subject/predicate sentence forces you to bring the information together as a distinct concept, not a vague designation of territory. When you force yourself to express things in terms of conclusions and relationships, you think in these terms, and you can test out their logic and support structures. The more complete and specific form of expression helps your professor and/or your graduate committee to understand more accurately what you are learning and how you are putting the work together. It's difficult for faculty to advise and support you if they do not know what you are doing.

Does everything fit within the category and support the conclusion? This doesn't seem to be part of the research sequence.

A. Family influence has been shown consistently to be the most significant variable, though many closely related factors have been identified as research has become more complex.
   1. Influence can be a relative concept.
   2. Prior to 1985, suppositions were made, but little specific research was conducted.
   4. Recent studies (1994-2004) have examined family influence in conjunction with factors related closely to it.
CHAPTER 2

TEST IT CRITICALLY

Now that you have worked out your structure and expressed your sequence of ideas, data, evidence, and conclusions in the form of complete statements, you (and your graduate committee) can examine them critically. During these organizing steps you have solved several problems that would otherwise nag at you and drag you down throughout the drafting process:

- You know what information fits in with your purpose and pattern and what doesn't. Thus you know what to put in and what to put away.

- You can deal with your information in sections, not all at once—it's less overwhelming. You're not constantly grasping for relevance and relationships because you've already worked them out.

- By looking backwards and forwards, you're able to see relationships clearly. This helps you in expressing those relationships as you draft—both within the paragraphs and in your transitions.

- If there are places where your information is skimpy, you can gather what is needed before you get into the momentum of the drafting process.

- You know where to put your headings and subheadings, and you have the key words you will need in composing them.

Writer-Reader Guideposts: a/k/a Headings and Subheadings

Contrary to popular opinion, headings and subheadings are not merely a formality or an afterthought in your writing. They can be among your strongest tools for controlling your own work and for making it accessible to others.

UNDERSTAND USES AND USEFULNESS OF HEADINGS AND CONSTRUCT THEM PURPOSEFULLY

Many people construct headings and subheadings mechanically and somewhat thoughtlessly because they do not understand what headings and subheadings should do.
Avoid these common errors:
- Superimposing headings after the text is completed
- Putting in headings at random as it dawns on you that direction is changing
- Using headings and subheadings to set off random and varied sizes and types of sections
- Expressing headings and subheadings in random formats: sometimes as phrases, sometimes as questions, occasionally as sentences

If you are very skilled (and lucky), headings/subheadings that are placed and constructed in random fashion may still be of some use to your readers—but only if you do them unusually well. Use of headings/subheadings can be a powerful tool if recognized and used properly.

Aim toward these aspects of functionality:
- Using headings and subheadings to express the pattern of your chapter (paper, article) and demonstrate major relationships
- Planning headings and subheadings before you begin drafting so they can guide you as you draft
- Using headings and subheadings to check the logic of patterns, relationships, and sequence
- Constructing headings and subheadings from key words from your outline and notes
- Placing headings and subheadings in your chapter (paper, article) in the same pattern and positions as the items on your outline
- Using headings and subheadings to guide the construction of your abstract and any other summary writing you are asked to submit

USE HEADINGS AND SUBHEADINGS TO REFLECT YOUR STRUCTURE.

The Publication Manual of the American Psychological Association (2001) states that headings and subheadings should “outline the hierarchy of the ideas ... and ... convey the sequence and levels of importance” (p. 10). You made the decisions in these areas as you prepared your outline. Thus the outline becomes the guide to heading/subheading construction.
**CHAPTER 2**

**Heading placement reflects the sequence and development of your ideas.** Let your outline guide you in placing headings and subheadings. Following is a very general and flexible guide.

<table>
<thead>
<tr>
<th>Outline Designation</th>
<th>Heading/Subheading</th>
<th>Representation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Roman Numerals (I, II, III)</td>
<td>First-level headings</td>
<td>Overall pattern of chapter, article, paper etc.</td>
</tr>
<tr>
<td>Capital letters (A, B, C)</td>
<td>Second-level headings</td>
<td>Pattern of ideas within the section</td>
</tr>
<tr>
<td>Arabic numerals</td>
<td>Third-level headings</td>
<td>Materials that support and develop</td>
</tr>
<tr>
<td>Lower-case letters</td>
<td>Fourth-level headings</td>
<td>More detailed breakdown of support patterns</td>
</tr>
</tbody>
</table>

Each new level of subheadings represents a breaking down of the unit of information.

You can't break anything down and come out with just one piece. You can have two, three, seven, or even fifty, but you don't break to one. Thus each time you break to a new level of subheadings, be sure that you have at least two. If you only have one unit to deal with, don't break down. You do not have to have the same number of breakdowns for every section.
Construct headings as fragments, not questions or sentences. Make them parallel grammatically within their “sets.”

| First Level: | Significance of Topic  
|             | Review of Literature  
|             | Rationale for Research |
| Second Level: | Influences  
|              | Interventions |
| Third Level: | Influence of Family  
|              | Influence of Peers  
|              | Influence of Community  
|              | Intervention with Family  
|              | Intervention through School Personnel |
| Fourth Level: | Parent-Child Relationships  
|              | Sibling Relationships  
|              | Extended Family Relationships |

These headings represent the pattern for the chapter. Each is a noun followed by a prepositional phrase.

These subheadings divide the literature review into its pattern. The subheadings don’t match the first-level headings, but they do match each other.

These represent the groupings of the works reviewed under influences. They are parallel within their sets. They may not match word for word, but they are the same kind of grammatical structure.

Groupings under the Influence of Family are broken down still further. Again the grammatical structure is equivalent, even if there is not word-for-word matching.
ARRANGE AND TYPE HEADINGS ACCORDING TO APA FORMAT

APA format uses five levels of headings. Unfortunately they are not added consecutively. The heading format you use as first level, second, third etc. depends on how many levels you are using.

Short article, one level

Centered, bold, initial caps

<table>
<thead>
<tr>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx</td>
</tr>
<tr>
<td>xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx</td>
</tr>
<tr>
<td>xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx</td>
</tr>
</tbody>
</table>

Medium article or paper, two levels

First-level headings—as above—centered, initial caps

Second-level headings—at margin, bold, initial caps

<table>
<thead>
<tr>
<th>Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx</td>
</tr>
<tr>
<td>xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx</td>

{48}
• Chapter headings for a dissertation or a thesis begin at the top of a new page. Headings begin at the first level.

• If a chapter designation (e.g., Chapter 3) is included along with the name of the chapter (e.g., Methods), use the same level and placement of heading for both.

Smooth Connections: a/k/a Transitions

USE TRANSITIONAL PARAGRAPHS BETWEEN MAJOR SECTIONS.

Some writers like to use brief transitional paragraphs between sections. This establishes a smooth relationship between sections, reminds the reader of the pattern of development, and reviews what went on in the previous section—for those who have become a little drowsy.

Though a transitional paragraph is not a personal statement, the author reveals his or her own thinking regarding the relationships—a real plus for students who want to reveal the depth of their own synthesis of ideas.

Because parental attitudes and behaviors are predominant in setting the tone and atmosphere of the home, most early studies have focused on the parents’ influence. However, siblings have an important role as well. Their supportiveness can be a deciding factor in the child’s adjustment, particularly if parents are inclined to be indecisive or inconsistent. Some more recent studies have revealed important factors related to sibling participation.

Sibling Influence

Inclusion of sibling roles began with the work of Francis and Morgan in 1994. They studied children from

The past section discussed parental attitudes and behaviors. Transitional paragraph begins by summing this up.

A relationship between the sections is expressed.

The following section is previewed.

The next heading announces the new section.

{ 50 }
USE SIMPLER TRANSITIONS WITHIN SECTIONS AND PARAGRAPHS

Within sections and paragraphs, additional transitions are needed to keep things orderly and to make the purpose and relationships behind the sequences clear.

Further studies have demonstrated that this form of aggression occurs frequently in children younger than researchers had earlier supposed. For example, Fitzwilliam (1994) found evidence in children of preschool age.

During the following decade studies on younger children included a wider variety of minority ethnic and cultural groups. Many were inconclusive.

This trend became more pronounced as researchers attempted a wider
There is no formula for transition. Most of us use too little transition because we assume too much of our reader’s knowledge of the topic and ability to make connections. What feels like too much to the writer is generally what is required for the reader. An English professor once explained to a graduate student that if she felt like she was putting signs on the doors of the rooms in her house, she was probably using transition about the way she should (Glade Hunsaker, personal communication to graduate student, 2000).

Logical Units: a/k/a Paragraphs

The paragraph is the basic unit of meaning that you use in research and other academic writing—and in most other types of writing, for that matter. You may not think very much about paragraphs when you are writing a letter, a journal, or a personal essay—they just seem to flow naturally. But paragraphing techniques are more important and need to be more deliberate when you are writing an academic paper, an article, a thesis, or a dissertation because information is more complex and easier to misunderstand.

Following are some questions that are often asked—consciously or subconsciously—about paragraphing.
CRAFTS AND PUZZLES

QUESTION 1: HOW LONG SHOULD A PARAGRAPH BE?

The Publication Manual of the American Psychological Association (2001) states that paragraphs should not be shorter than two sentences or longer than a full page. In general practice writers who know what they are doing can make very effective use of a one-sentence paragraph, and many lawyers, novelists and social scientists can produce paragraphs longer than a page that they think are coherent and accessible. However, when in APA territory, you need to follow APA instructions.

The most important thing to remember about paragraphing is that a paragraph is a purposeful unit. As different paragraphs will have different purposes, they will have different lengths. A paragraph is the right length when it has fulfilled its purpose.

A nice little quotation that has been passed around so much that no one can remember who originated it says. “A paragraph is like a skirt. It should be long enough to cover the subject, but short enough to still be interesting.”

QUESTION 2: HOW DO I MAKE THE PURPOSE CLEAR AND EASY TO UNDERSTAND—BOTH TO MYSELF AND TO MY READER?

Paragraphs may have different functions or purposes. As noted in the section on transition, sometimes the purpose of a paragraph will be transition. Such a paragraph may be only two or three sentences. A similarly short paragraph may be used to isolate a particular point for emphasis. Some people will isolate the thesis or purpose statement, along with necessary explanations and definitions, resulting in a very short paragraph that calls for special attention by its appearance as well as by its lack of developmental detail.

A developmental paragraph will have a controlling idea along with its necessary development and support. Most paragraphs are developmental: They take a particular portion of ideas/information and develop it to the extent required for it to be clear and convincing (long enough to cover the subject) but not with so much bulk that it's overburdened (short enough to still be interesting). In a narrative or descriptive paragraph, the details generally come together naturally without the writer consciously composing a topic sentence and comparing the selection of details against it. In academic writing, however, information is complex and often technical. Paragraphs that are not composed with a controlling sentence often wander aimlessly around both the writer's and the readers’ minds.

{53}
The topic sentence is a direct statement bringing information in the paragraph together as a purposeful whole. It can be placed anywhere in the paragraph, but the most common area is within the first three sentences so that it gives maximum control to both the writer and the reader. A writer who places the defining statement early is staring at it while composing the paragraph—this “visual aid” makes it harder to stray off the topic. A reader who sees the topic sentence early has an early understanding of why the information has been selected and how it comes together to make its point.

QUESTION 3: ARE PARAGRAPH DIVISIONS PREDESTINED? AM I DISCOVERING OR CRAFTING?

Crafting—definitely crafting! In a good percentage of cases, there are different ways that information can be grouped as units. With practice, you will learn to spot options as you draft.

- Perhaps you have three studies that all support the same basic conclusion. You will have three or four sentences discussing each. Do you combine all three as one paragraph since they all support the same point? Or do you use separate paragraphs since the studies were completed at different times in widely separate places with different research designs?

- Suppose you are comparing two strategies for dealing with a problem. You will have five or six sentences for each. Do you deal with both strategies in the same paragraph since you want to show the superiority of one strategy over the other? Or do you put them in separate paragraphs since they are really separate strategies?

- You want to use a fairly detailed case study to illustrate a significant point. Do you put the whole case study in one paragraph since it is just one case? Or do you separate it into parts?

Obviously these are very common decision situations. In each, either one relatively long unit or two or three relatively short units could be justified logically. In these or dozens of comparable situations, the decision is yours as the author. You might want to take a couple of decision factors into consideration:
Consider the purpose of the paragraph.

Short paragraphs are more emphatic. Just as a portrait that isolates one face and a few details makes the face stand out more, isolating one study, one side of a comparison, one reason, one cause etc. causes it to stand out with more impact.

Long paragraphs emphasize interrelationships. By grouping a number of things within a paragraph, you cause the reader to process them together, without a visual (and thus mental) break. Content is processed together and thus stored and naturally retrieved together. The reader remembers the unifying point.

Thus you might ask these questions: “Do I want to emphasize the characteristics of the individual studies or do I want to emphasize the shared conclusion?” “Do I want to emphasize the individual strategies, or do I want to emphasize contrasting features?”

Remember that variation helps to hold a reader’s attention and interest.

- Both long and short are easier to process when there are not too many in sequence of either one.
- Too much sameness keeps anything from seeming distinctive or significant.
  Too many short paragraphs in sequence gives a choppy effect.
  Too many long paragraphs in sequence feels heavy.

Thus you might ask questions such as these: “Are the paragraphs surrounding the three studies quite short?” If so, you might choose to combine the three studies into a longer paragraph to break up the choppiness. “Are the surrounding paragraphs quite long?” If so, then you’ll probably want to give your reader a mental break by putting the studies in their own short paragraphs.

As for the case study, a student really did include a case study that ran a page and a half, and she put it all in one paragraph. It was a killer! A paragraph shouldn’t go over a page, and very few should go over half to two thirds of a page. If you find yourself with a lot of chokingly long paragraphs, you may want to try to reprogram your mind to think in shorter units.
CHAPTER 2

QUESTION 4: ONCE I'VE CHosen WHAT TO PUT IN THE PARAGRAPH, HOW DO I LINK THINGS UP SO THAT THEY FLOW SMOOTHLY?

Fitting pieces together in a paragraph is like putting together pieces of a jigsaw puzzle. Pieces are cut independently, yet they need to come together to form a complete picture.

For the individual pieces within their pattern, the topic sentence is like the border of the puzzle. It establishes parameters and puts the ground, the sky and the ocean in perspective. We know which shade of blue goes above and which goes below. Your need to discern the basic relationship of the pieces and then manipulate them carefully to discover which notch goes in which indentation to make that picture come together smoothly.

Sometimes we find the diverse elements that make up paragraph content are kind of loosely distributed within the boundaries of the topic sentence—sort of like putting together the puzzle border and then throwing the pieces at random in the middle. If not anchored to the topic sentence and attached satisfactorily to each other, these pieces are going to be loose and disconnected—both in the writer's mind and in the reader's consciousness. If the paragraph has been planned purposefully, the information relates up—you just need to make those relationships clearly evident. There are several techniques and strategies you can use to do this:

Develop things completely enough that connections can be understood and processed. Here is a paragraph full of loose, independent pieces:

Because an empty house or apartment can be a frightening place to come home to, many latchkey children attempt to create a safer environment. Some turn on lights (Galambos, 1983) or play the radio or television. The telephone often becomes the child's life connection to other people (Long & Long, 1983). The child may attempt to shrink the size of the environment. Some children deliberately fall asleep (Long & Long, 1983).
With additional information, the pieces become meaningful and the connections become clear.

Because an empty house or apartment can be a frightening place to come home to, many latchkey children attempt to create a “safer” environment. One way to do this is to eliminate what they perceive as a threat. For example, children who associate darkness with fear may turn on all the lights in the house (Galambos, 1983). Those who are afraid of loud or unexpected noises may turn a radio or television set to a high volume in an attempt to block out threatening sounds. Children who have a fear of being alone will quickly use the telephone to bring another person into their lonely world (Long & Long, 1983). If they cannot eliminate or mask their fears, children may resort to more intangible attempts to gain control. Some children attempt to shrink the size of their environment by hiding in places that are small enough for them to feel safe: in closets, behind furniture, under beds, or in other enclosed areas (Levine, 1980). In these places, they seem to feel comfortable until a large adult arrives to protect them from the larger environment. Other children try to fall asleep so that they can create a safer world in their dreams (Long & Long, 1983).
Fill in the gaps and lead the reader smoothly through by using transitional statements: sentences, phrases, even single words that connect things up.

Here's the sample revised paragraph again. This time the notches (a.k.a. transitions) are highlighted rather than the extensions.

Because an empty house or apartment can be a frightening place to come home to, many latchkey children attempt to create a “safer” environment. One way to do this is to eliminate what they perceive as a threat. For example, children who associate darkness with fear may turn on all the lights in the house (Galambos, 1983). Those who are afraid of loud or unexpected noises may turn a radio or television set to a high volume in an attempt to block out threatening sounds. Children who have a fear of being alone will quickly use the telephone to bring another person into their lonely world (Long & Long, 1983). If they cannot eliminate or mask their fears, children may resort to more intangible attempts to gain control. Some children attempt to shrink the size of their environment by hiding in places that are small enough for them to feel safe: in closets, behind furniture, under beds, or in other enclosed areas (Levine, 1980). In these places, they seem to feel comfortable until a large adult arrives to protect them from the larger environment. Other children try to fall asleep so that they can create a safer world in their dreams (Long & Long, 1983).
Provide a subtle sense of fit by echoing: (1) repeating key words and phrases, (2) using synonyms, and (3) selecting words that have similar connotations (affective associations).

You don’t have to read the paragraph again, just look at what is highlighted this time.

Because an empty house or apartment can be a frightening place to come home to, many latchkey children attempt to create a “safer” environment. One way to do this is to eliminate what they perceive as a threat. For example, children who associate darkness with fear may turn on all the lights in the house (Galambos, 1983). Those who are afraid of loud or unexpected noises may turn a radio or television set to a high volume in an attempt to block out threatening sound. Children who have a fear of being alone will quickly use the telephone to bring another person into their lonely world (Long & Long, 1983). If they cannot eliminate or mask their fears, children may resort to more intangible attempts to gain control. Some children attempt to shrink the size of their environment by hiding in places that are small enough for them to feel safe: in closets, behind furniture, under beds, or in other enclosed areas (Levine, 1980). In these places, they seem to feel comfortable until a large adult arrives to protect them from the larger environment. Other children try to fall asleep so that they can create a safer world in their dreams (Long & Long, 1983).
QUESTION 5: DO I HAVE TO DO ALL OF THIS AT ONCE?

Strategies and techniques for improving organization and coherence in your writing are like strategies and techniques involved in most other craft and skill areas: They may seem a little artificial and somewhat overwhelming at first, but they become easier and more natural as you practice them. Just as principles of visual design, techniques for a musical instrument, or movements applied in athletic skills gradually become part of the way you deal with the contents and materials, you will find that organization and coherence strategies gradually become an unconscious (or at least semiconscious) part of the way you do informational writing.

Work out your organization through your outline before starting to draft. Doing this allows you to double check your thinking before you begin putting things into final word choice, and it lessens the strain of struggling with what you are going to say so that you can put your full efforts into how you want to say it.

Yes, you’ll come to some new insights as you draft, and you’ll want to shift a few things around and incorporate new ideas and conclusions. Deeper and more creative application of material is one of the benefits of the language process. But you can handle changes fairly easily and naturally if you have basic control.

Let yourself draft fairly freely. If you’re aware of the need for topic sentences and transition, these things will come fairly naturally as you write, since you have worked out the relationships previously and are able to think in terms of them. Get a friend, spouse, or coworker to read over your draft—or sections of it—to tell you where there are gaps. Your spouse is in a completely different major?—that’s fine, preferable in fact. Someone closely related to your area of study may mentally fill in the gaps for you. An outsider who is grappling with your meaning will notice them. Be sure you choose someone who will be critically honest with you.

As you’ve been fitting things into place, you have kept careful track of where you have found ideas, studies, applications, evidence and other materials that will generate, support and enhance your thinking. As you draft, you need to make these sources clear and easy to discern and at the same time keep your style smooth and coherent. The next chapter helps you with this aspect of your work.
