Sharing a Story to Facilitate Social and Emotional Learning

Many children with disabilities such as developmental language disorders, language-learning disorders, social communication disorders, or autism spectrum disorders have difficulty with aspects of social and emotional learning. These children often need explicit, repeated instruction designed to facilitate emotion understanding, conversational ability, and language comprehension and production skill. The following informal script is designed to help interventionists (caregivers and professionals) focus on and emphasize important concepts.

The following storybook has been selected because it has a well-defined story structure, clear language, rich emotion content, and engaging illustrations. A script is provided to guide interventionists as they share this book. Initially, concepts are listed that this book is particularly well suited to teach. These include social and emotional knowledge, interactional skills, vocabulary, and language structure.

Following the list of concepts, a series of prompts is provided for each story page. These prompts include questions, comments, and brief activities (e.g., making a facial expression in a mirror) designed to teach specific concepts. The interventionist may read the story text for each page and then present any of the prompts they feel would be most appropriate. The script is designed to be flexible and adjusted to each child’s needs.

At the conclusion of the story script, a series of questions is provided to probe how well children understand and identify emotions that story characters experience. If desired, these questions can be used to evaluate how well children grasp the emotion content of the story.

Following story sharing, the interventionist may guide children to enact the story using simple props. This activity facilitates story comprehension by assisting children to understand the internal states and motivations of characters. Older children may prefer a readers’ theater format or choose to provide additional text or dialog to the storybook by using attachable note paper.
