

Mothers Needed for an Autism & Anxiety Research Study

We are seeking mothers whose children have been diagnosed an anxiety disorder (e.g., generalized anxiety, social phobia, etc.). Participants will be asked to fill out several surveys and complete a face-to-face interview about their child so that we may compare how children with ASD experience anxiety in comparison to their anxious, typically developing peers.

- * Participation in this study will take between 120-150 minutes to complete
- * Participants will receive a \$45 VISA gift card for their participation
- * Children must be: 12-16 years of age, male, & completing schoolwork at (or near) their grade level
- * Child must have been diagnosed with anxiety by mental health professional
