Study of Brain Networks in Children with Autism and Typical Development

We are recruiting!

Who can participate?
• Males 5-12 years of age
• Diagnosis of autism or Asperger syndrome or typical development
• No history of seizures, severe head injury or severe medical problem

Participation involves:
• MRI (brain scan)
• 4-hour time commitment for assessment

Participation benefits:
• Receive a picture of your brain!
• Report from MRI scan and testing
• Compensation for completing study activities
• Findings will contribute to better understanding of brain basis of autism
